                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            80
                                                                                                                                                                                                                                                                                                                                                                                 20
              patients. The beta-TrcP protein, and its active peptide fragments, or inuclaic acid, are used to screen for anti HIV-1 agents (antivirals), antitumour agents that disrupt cell cycle regulation or protein degradation in human tumour cells, and anti-inflammatcry agents that disrupt activation by NFkappaB. Fragments of the protein are also useful for treating osteo-articular inflammation or acute inflammation associated with release of tumour necrosis factor.

This DNA encodes human beta-TrCP, an F-box/ND protein family member, which has been shown to have homology to human E3 ubiquitin ligase (E3). E3 enhances ubiquitination of phosphorylated I-kappa-B, an inhibitor protein of nuclear factor kappa-B (NF-kappa-B). Understanding I-kappa-B degradation via the ubiquitin pathway is useful for identifying modulators of this process for use in treating diseases associated with activation of NF-kappa-B. In vitro analysis suggests that deletion of the F-box results in a protein that functions as a dominant negative molecule in vivo. Transfert over-expression of edication mutant) inhibited the degradation of endogenous I-kappa-B path in stimulated Jurkat cells, resulting in accumulation of phosphorylated in stimulated Jurkat cells, or screen for modulators of NF-kappa-B cotivity. E3 and beta-TrCP can be used to modulate NF-kappa-B to treat inflammatory diseases, autoimmune diseases, cancer and viral infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0.4

```
ovel nucleic acid for screening compounds useful for treating roliferative and differentiative disorders such as cancer and immune isorders comprises sequences encoding ubiquitin ligases
```

ısclosure; Figure 3b, 3c, 3d; 245pp; English.

ingleic acids encoding substrate-targeting subunits of ubiquitin igases with F-box motifs (F-box proteins) are useful for diagnosiss proliferative and differentiated related disorders by measuring 3P gene expression. Cells expressing such proteins or leir fragments are useful for screening compounds. The compounds re agonists or antagonists, which are useful for treating a rolliferative or differentiative disorder in a mammal such as reast, ovarian and prostate cancer and small cell lung carcinoma ridiovascular diseases and inflammantory disorders. PBP protein, analogs, derivatives and their subsequences, anti-FBP antibodies also useful in diagnosis of the disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               e F-box proteins are a family of ubiquitin ligases (SCF ubiquitin jases) which can be used for the targetted degradation of a target bypeptide in vivo. Targetted degradation is achieved by expressing a ubiquitin ligase in a cell linked to the interaction domain of a target polypeptide and thereby recruiting the target polypeptide and strengt polypeptide of a target polypeptide and for decreasing or breasing the level of a target polypeptide and for creating and ressing a destabilized polypeptide which is subjected to SCF listed proteolysis. Degrading any desired protein in a cell is sful for preventing or treating diseases caused by the presence of normal amount of the specific polypeptides, for drug discovery and regene therapy. Diseases treated include cancer, by degradation of copporations. The method provides a quick and easy proteins. The method provides a quick and easy can degraded at all stages, or a specific stage, of development in the

The invention relates to methods of altering the polypeptide levels in a cell, using proteins selected from S-phase kinase associated proteins 1 and 2 (SKP1, SKP2), SKP2-like proteins (EP) and CUL-1 (a member of the cullin/ CDC51 family of proteins). The method is useful for altering the polypeptide in a cell. SKP2 and SKP2-like protein levels are useful for detecting tumours, and in monitoring tumor treatment in a mammal. Agents that modulate interactions between SKP and target proteins are useful for
                                                                                  Modulating polypeptide levels in a cell, diagnosing and treating tumor, involves altering levels of proteins such as S-phase kinase associated proteins 1, 2 and cullin/CDC53 proteins -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CTGTCATACCTGGATGCCAAATCACTATGTGCTGCTGAACTTGTGTGCAAGGAATGGTAC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ArgvalThrSerAspGlyMetLeuTrpLysLysLeuIleGluArgMetValArgThrAsp

The invention relates to screening compounds useful for the treatment of proliferative or differentiative disorders comprising detecting a change in the activity of SRp2 (F-box protein). The method is useful for screening compounds for the treatment of proliferative or differentiative disorders, particularly cancer. These compounds include small molecules, or compounds or derivatives or analogues of the new ubiquitin ligases. The compounds are useful for treating diseases such as cancer (e.g. breast cancer, prostate cancer or ovarian cancer, lymphoma, small cell lung carcinoma or parathyroid adenomas), major opportunistic infections, immune disorders, certain cardiovascular diseases or inflammatory disorders. This polymolectide sequence represents the oDNA encoding an F-box protein (FBP) of the invention.
                                                                                                                                                                                                                              Cytostatic, immunomodulator, cardiant, antiinflammatory; antimicrobial, proliferative, differentiative disorder, Skp2, F-box protein, cancer, ubiquitin ligase, breast cancer, prostate cancer, ovarian cancer, small cell lung carcinoma, immune disorder, parathyroid adenoma, FBP; inflammatory disorder, lymphoma, major opportunistic infection, certain cardiovascular disease; human, gene, ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MetAspProAlaGluAlaValbeuGlnGluLysAlabeuLysPheMetAsnSerSerGlu

he invention relates to a complex of protein-protein interactions forming a protein-protein interaction map, PIM) in adipocyte cells as sincined in the specification, or polynucleotides in adipocyte senceding the teracting polypeptides. Also included are a recombinant cell expressing the teracting polypeptides and a method of selecting a modulating compound adium containing a modulating a recombinant host cell on a selective spression of which is toxic for the recombinant host cell which is ansigned weeters, where the first vector comprises a summin and the second vectors, where the first vector comprises a summin and the second vector comprising a polynucleotide encoding a scond hybrid polypeptides the second vector comprising a polynucleotide encoding a scond hybrid polypeptides the recombinant host cell (i.e. using the yeast two-hybrid polypeptides and selecting the modulating compound which inhibits the rowth of the recombinant host cell (i.e. using the yeast two-hybrid to protein or metabolic disconders and useful for treating obesity and tabolic disconders eng. non-insulin dependent dispetes mellitus, rewning obesity or metabolic diseases. The interactions between the proteins of the complex further define a member of the protein summins, SiD. The present sequence encodes a member of the protein when the present sequence encodes a member of the protein very brid assay.

It encodes cell signalling protein-12 (CSIGP-12). It expressed in musculo-skeletal, gastrointesinal and nervous such an expressed in musculo-skeletal, gastrointesinal and nervous such areas of CSIGP encoding nucleic acid can be used as bridisation probe for detecting CSIGP related sequences or allelic iants. Recombinant CSIGP can be produced in host cells by transforming m with genetically engineered vectors. Agonists or antagonists can be id in the treatment of cell proliferative and inflammatory disorders isociated with decreased or increased CSIGP expression. CSIGP is used in idagnosis, prevention and treatment of cell proliferative disorders ce arteriosclerosis, cirrhosis, cancer, hepatitis and inflammatory

expressed in the bone marrow. The polymuclectide and the polypetide encoded by it are useful in the treatment of various immune deficiencies and disorders. The deficiencies and disorders may be genetic, may be caused by a viral (e.g. HIV), bacterial or fungal infection, or may result from an autoimmune disorder, a coagulation disorder (e.g. haemophilia), inhibition of tumour cell proliferation, suppression of an inflammatory response or treatment of a nervous system disorder such as Alzheimer's disease. Detection of the presence or increased expression of the polymucleotide or the protein it encodes is useful for the diagnosis and/or prognosis of one or more types of cancer. The polymucleotide and polypeptide can be used as nutritional sources or supplements and in the screening of chemical compounds as potential drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel bone-marrow-expressed polynucleotides and polypeptides, useful for treating e.g. cancer and immune deficiency disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            present sequence is one of 251 novel human polynucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; Page 428; 648pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, heematopolesis regulating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        e present invention describes an F-box motif protein of ubiquitin gase SCF complex which promotes the ubiquitination of IkappaB or ta-catenin and is constituted by Skpl protein, cull protein and a mplex (SCF complex) of F-box protein containing F-box motif and WD40 peat motif and has the amino acid sequence of 45 residues (AAB12811) one of two S69 residue sequences (AAB12812, which is mouse ubiquitin gase FWD1 protein) and (AAB12813, which is human beta-transducin peat containing protein (beta-TrCP)). The F-box protein can be used for e game therapy of colon cancer by being recombined to a virus vector. on the present invention.

polypeptide in vivo. Targetted degradation is achieved by expressing the target polypeptide and thereby recruiting the target polypeptide and thereby recruiting the target polypeptide to the target polypeptide and thereby recruiting the target polypeptide confined are useful for decreasing or increasing a destabilized polypeptide which is subjected to SCF mediated proteolysis. Begrading any desired protein in a cell is useful for preventing or treating diseases caused by the presence of abnormal amount of the specific polypeptides, for drug discovery and for gene therapy. Diseases treated include cancer, by degradation of concoproteins, Huntington's disease, other proliferative disorders and microbial infections. The method provides a quick and easy alternative to gene knockout technology. The target polypeptide can be degraded at all stages, or a specific stage, of development in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     390
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          140

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is one of 251 novel human polynucleotides expressed in the bone marrow. The polynucleotide and the polypeptide encoded by it are useful in the treatment of various immune deficiencies and disorders. The deficiencies and disorders may be genetic, may be caused by a viral (e.g. HW), bacterial or fungal infection, or may result from an autoimmune disorder, a coagulation disorder (e.g. haemophilia), inhibition of tumour cell proliferation, suppression of a inflammatory response or treatment of a nervous system disorder such as Ahraimer's disease. Detection of the presence or increased expression of the polynucleotide or the protein it encodes is useful for the diagnosis and/or propenois of one or more types of cancer. The polynucleotide and polypeptide can be used as nutritional sources or supplements and in the screening of
                                                                                                                                                                                                                  Human, bone marrow, antiinflammatory, cytostatic, neuroprotective, antiviral; antibacterial; antifungal; anti-HIV, haemostatic; immunosuppressive; gene therapy, cytokine cell proliferation; cell differentiation modulator; immune disorder; infection; cancer; human immunodeficiency virus; HIV; autoimmune disorder; haemophilia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             il bone-marrow-expressed polynucleotides and polypeptides, useful
treating e.g. cancer and immune deficiency disorders -

The viscoletion of other cytokines in other cell populations. The viscoletion of objypeptides have various cytokine-like activities, refer cell growth factor activity, haematopoiesis regulating ivity, tissue growth factor activity, immunomodulatory activity and ivin/inhibin activity and may be useful in the diagnosis and/or itment of cancer, leukaemia, nervous system disorders, arthritis and lammation.

No. is the number of results predicted by chance to have a
core greater than or equal to the score of the result being printed,
id is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Published Applications NA:*

Sequence 20, Application US/09213808A

Patent No. US20020164683AI

GENERAL INFORMATION:

APPLICANT: Li, Jinhe

APPLICANT: Pharmacia & Upjohn Company

TITLE OF INVENTION: Haman Sel-10 Polypeptides and Polymucleotides that

TITLE OF INVENTION: Encode Them

FILE REPERENCE: 6142

CURRENT APPLICATION NUMBER: US/09/213,888A

CURRENT FILING DATE: 1998-12-17

NUMBER OF SEQ ID NOS: 27

SOFTWARE: Patentin Ver. 2.0
